UNIVERSITI SAINS MALAYSIA

CMT221/CMM222: Database Organization and Design
Semester 1, Academic Session: 2021/2022

System Implementation

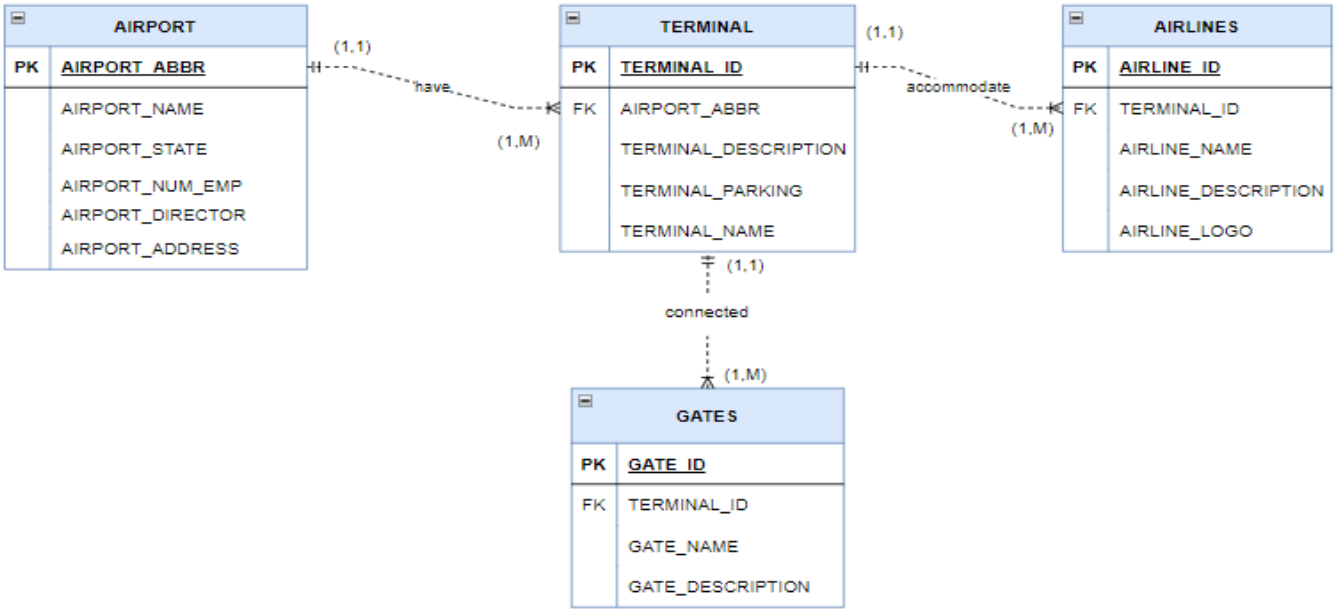
Group Number 11
Case Study Number: 37

Date of Submission
6 February 2021

1.0 Business Rules and Partial ERDs

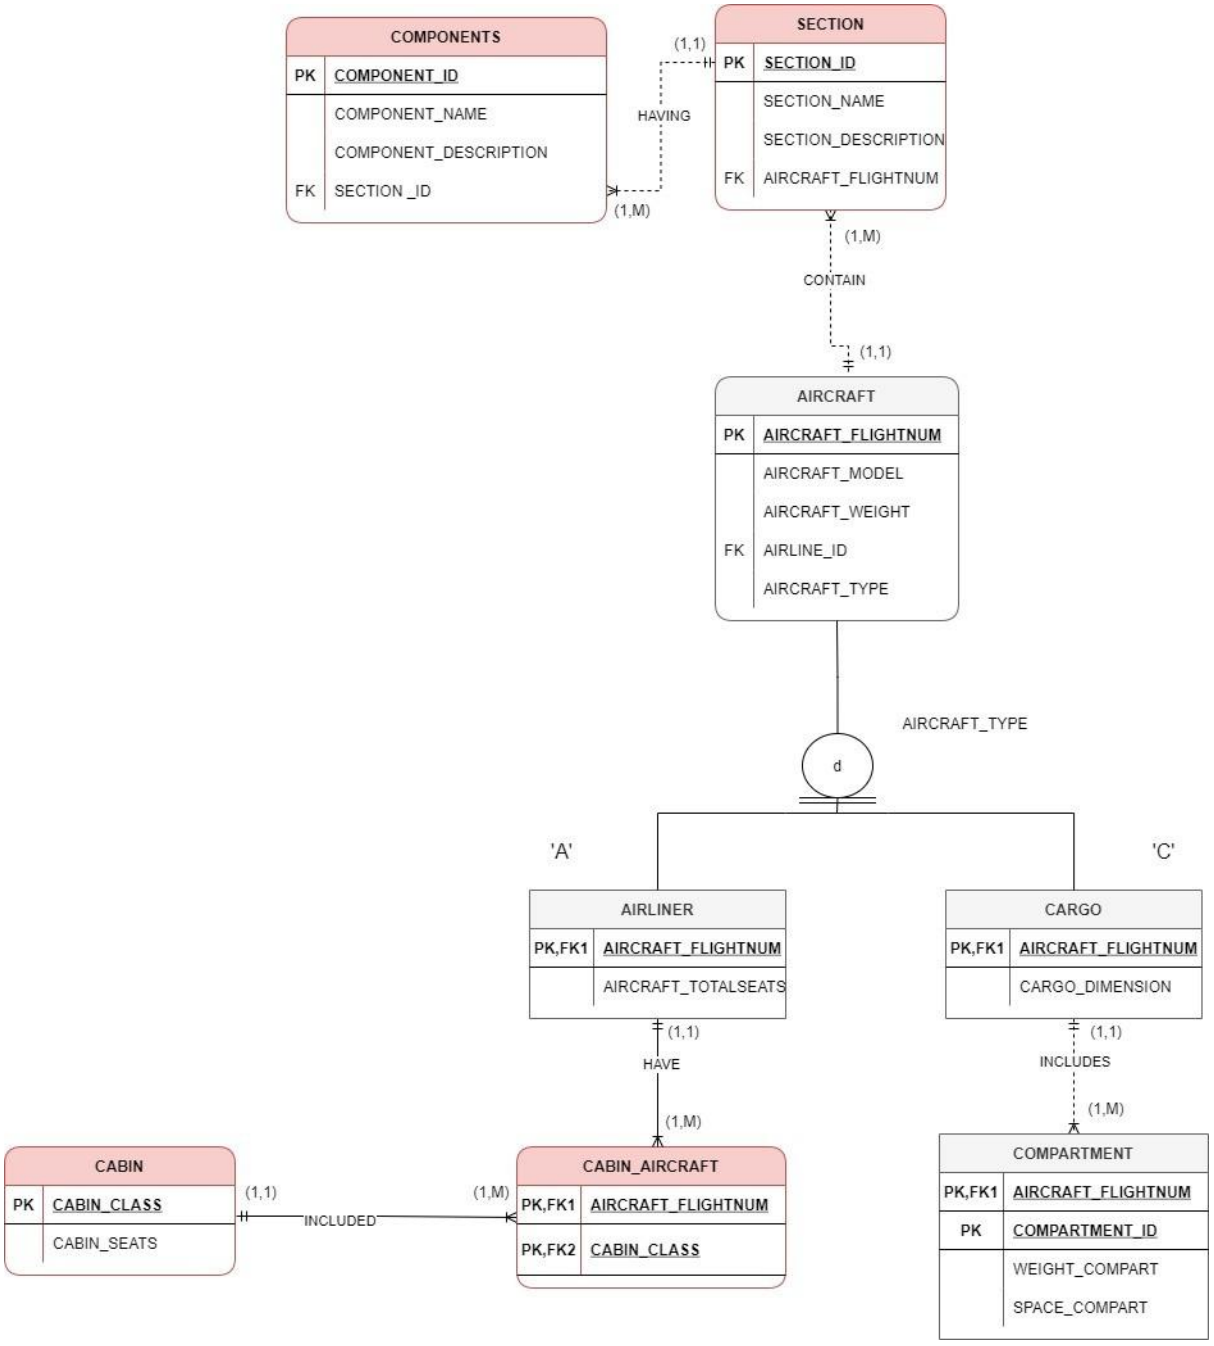
Module 1: [Airport Information – Muhammad Nur Hafiz bin Jamal]

- Each airport can have more than one terminal and each terminal can have only one airport.
- Each terminal can accommodate one or more airlines and each airline can accommodate only one terminal.
- Each terminal is connected to multiple gates and each gate should be connected to one terminal.
- Each airport involves more than one flight, and each flight is involved in one airport.
- Each airline has many aircraft, and each aircraft has one airline.



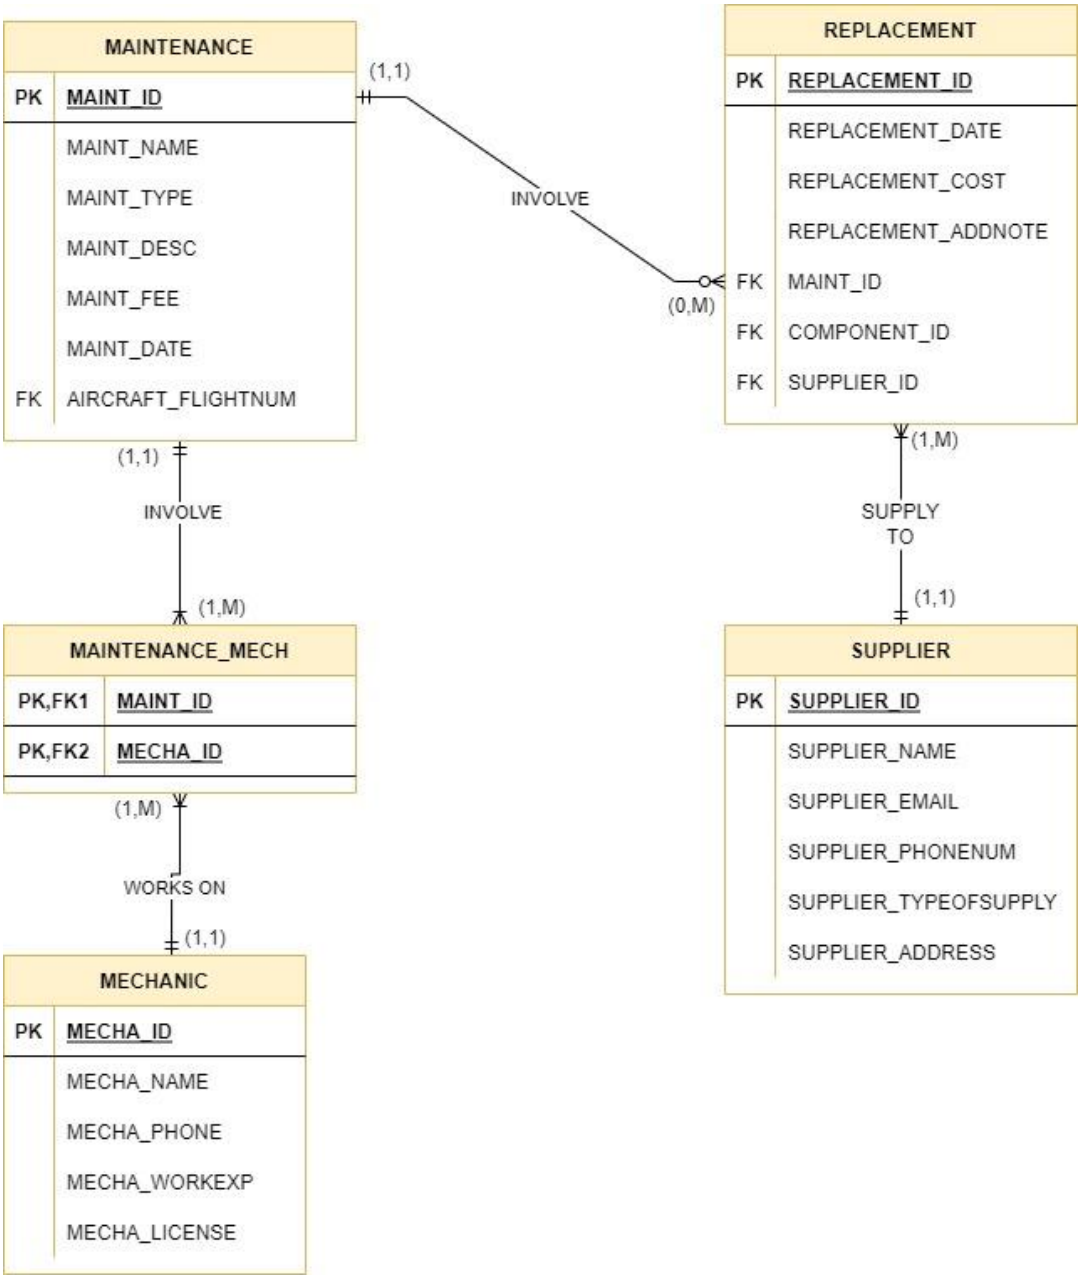
Module 2: [Aircraft Information – Haziq bin Hizul]

- Each airline should have multiple aircraft and each aircraft only one airline
- Each aircraft can have many cabins classes and each cabin class is available for many aircraft
- Each aircraft will also have many sections and each section only in an aircraft
- Each section will have many components and each component will only be available for one section.



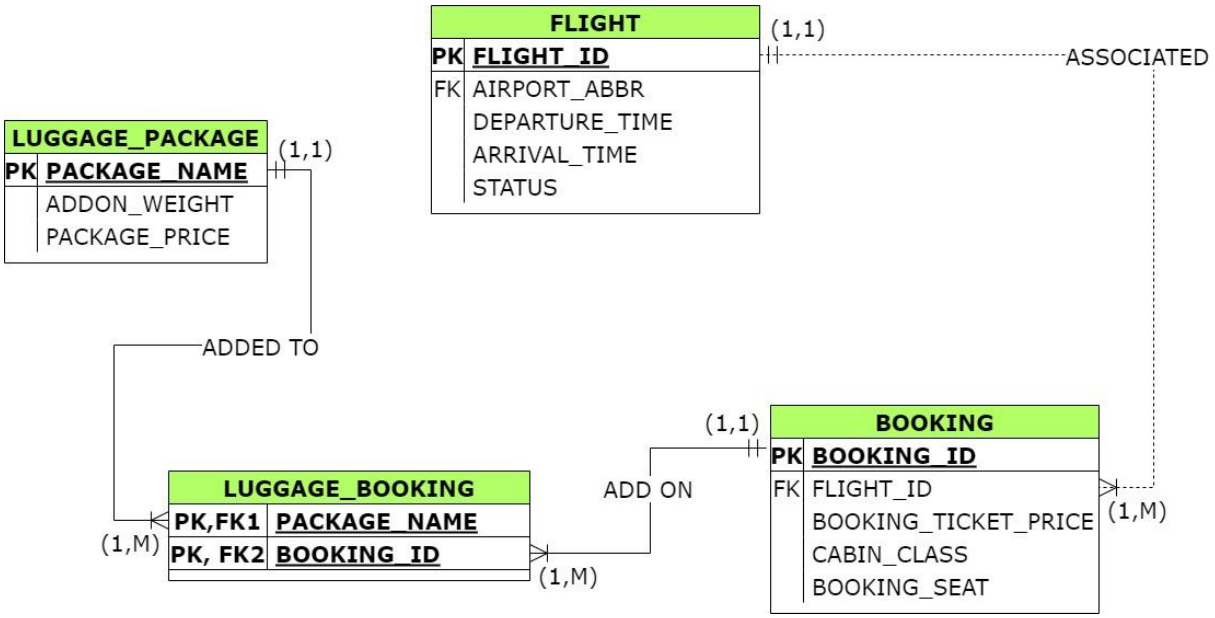
Module 3: [Maintenance Information – Mohammed Hammad]

- Each mechanic can be involved in one or many maintenances jobs
- Each maintenance job should involve one or many mechanics
- A supplier may supply one or more replacement components
- A replacement component can be supplied by one supplier
- A Maintenance job can have zero or more replacements



Module 4: [Flight Information – Azri Zamrud bin Kimin]

- Each airport should be involved in many flights and each flight can be in one airport
- Multiple bookings are associated with each flight and each flight should link with multiple bookings.
- Each booking can be added to multiple luggage packages and each luggage package can be added to multiple bookings



Section 2.0

- An aircraft can only be either airliner or cargo plane and an aircraft cannot be both types at the same time.
- Cargo planes can include one or many compartments and each compartment is included in one and only cargo.

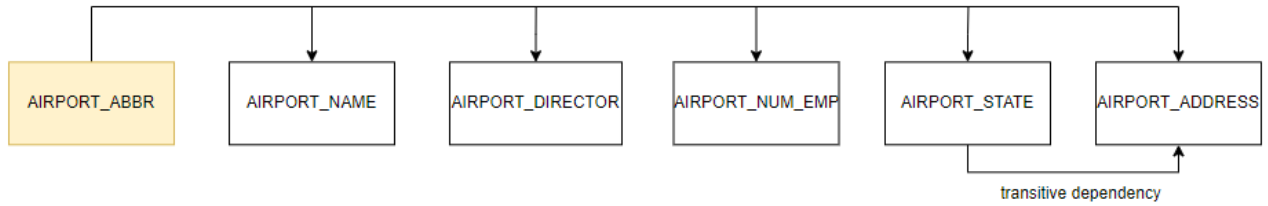
3.0 Normalization

Module 1: [Airport Information – Muhammad Nur Hafiz bin Jamal]

2NF
Table: AIRPORT



This table AIRPORT, we have not achieved high normal form yet. There are transitive dependency between non key attributes AIRPORT_ADDRESS and AIRPORT_STATE. To achieve high form, we need to remove the transitive dependency by creating a new table.

3NF (remove the transitive dependency)
Table: AIRPORT

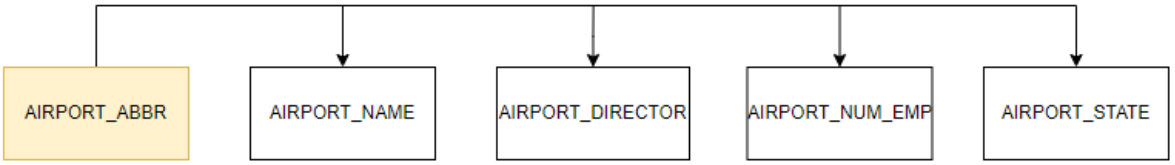


Table: ADDRESS

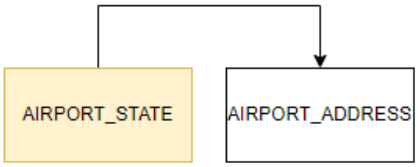
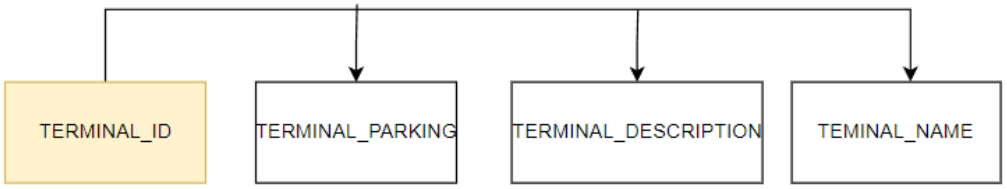


AIRPORT(AIRPORT_ABBR, AIRPORT_NAME, AIRPORT_DIRECTOR, AIRPORT_NUM_EMP, AIRPORT_STATE)

ADDRESS(AIRPORT_STATE, AIRPORT_ADDRESS)

There is no more partial dependency or transitive dependency. These tables are already in higher normal form.

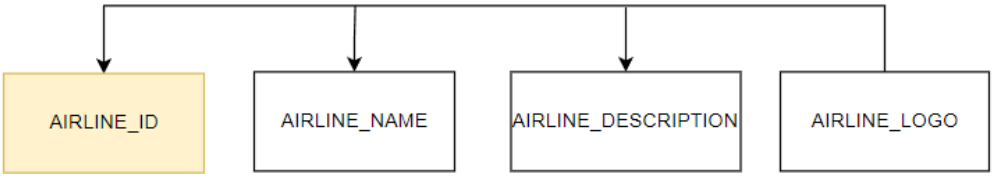
3NF
Table: TERMINAL



TERMINAL(TERMINAL_ID, TERMINAL_PARKING, TERMINAL_DESCRIPTION, TERMINAL_NAME)

There is no more partial dependency or transitive dependency. This table is already in higher normal form.

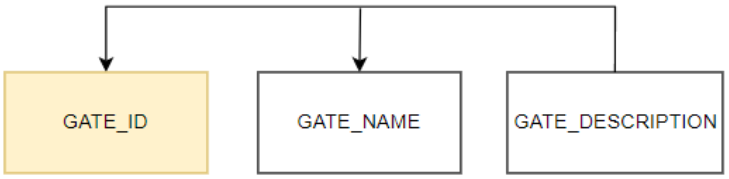
3NF
Table: AIRLINES



AIRLINES(AIRLINE_ID, AIRLINE_NAME, AIRLINE_DESCRIPTION, AIRLINE_LOGO)

There is no more partial dependency or transitive dependency. This table is already in higher normal form.

3NF
Table: GATES



GATES(GATE_ID, GATE_NAME, GATE_DESCRIPTION)

There is no more partial dependency or transitive dependency. This table is already in higher normal form.

  USING INDEX  ENABLE
   )
/
ALTER TABLE  "FLIGHT" ADD CONSTRAINT "FK_FLIGHT" FOREIGN KEY ("AIRPORT_ABBR")
          REFERENCES  "AIRPORT" ("AIRPORT_ABBR") ENABLE
/
```

BOOKING table:

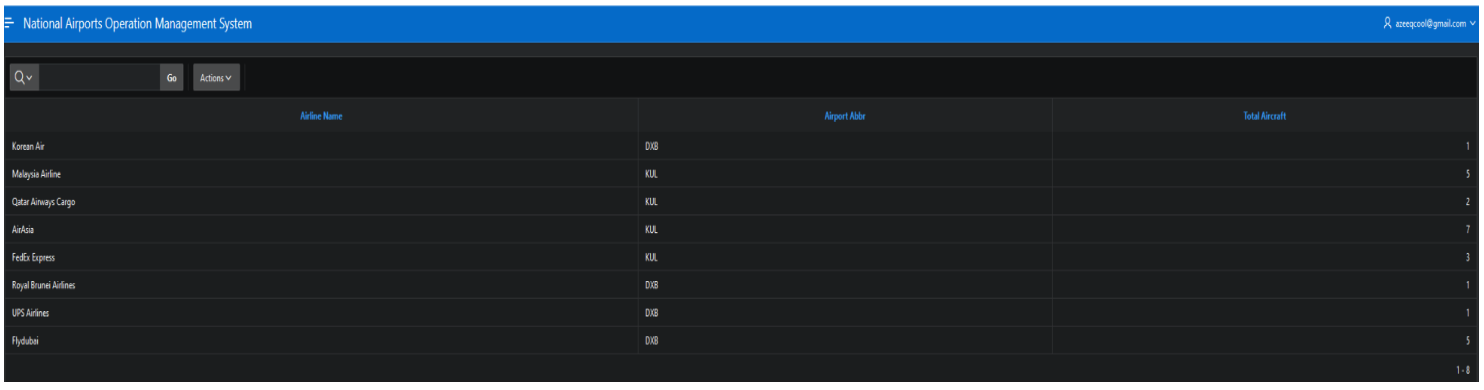
```
CREATE TABLE  "BOOKING"
   (    "BOOKING_ID" VARCHAR2(7),
        "FLIGHT_ID" VARCHAR2(7),
        "BOOKING_TICKET_PRICE" NUMBER(6,0),
        "CABIN_CLASS" VARCHAR2(20),
        "BOOKING_SEAT" VARCHAR2(10),
         CONSTRAINT "PK_BOOKING" PRIMARY KEY ("BOOKING_ID")
  USING INDEX  ENABLE
   )
/
ALTER TABLE  "BOOKING" ADD CONSTRAINT "FK_BOOKING" FOREIGN KEY ("FLIGHT_ID")
          REFERENCES  "FLIGHT" ("FLIGHT_ID") ENABLE
/
```

LUGGAGE_PACKAGE table:

```
CREATE TABLE  "LUGGAGE_PACKAGE"
   (    "PACKAGE_NAME" VARCHAR2(30),
        "ADDON_WEIGHT" NUMBER(2,0),
        "PACKAGE_PRICE" NUMBER(5,0),
         CONSTRAINT "PK_LUGGAGE_PACKAGE" PRIMARY KEY ("PACKAGE_NAME")
  USING INDEX  ENABLE
    )
/
```

5.2 DML

```
select count(AIRCRAFT.AIRCRAFT_TYPE) as TOTAL_AIRCRAFT,
   AIRLINES.AIRLINE_NAME as AIRLINE_NAME,
   AIRPORT.AIRPORT_ABBR as AIRPORT_ABBR
 from TERMINAL TERMINAL,
   AIRPORT AIRPORT,
   AIRLINES AIRLINES,
   AIRCRAFT AIRCRAFT
 where AIRCRAFT.AIRLINE_ID=AIRLINES.AIRLINE_ID
   and AIRLINES.TERMINAL_ID=TERMINAL.TERMINAL_ID
   and TERMINAL.AIRPORT_ABBR=AIRPORT.AIRPORT_ABBR
 group by AIRLINES.AIRLINE_NAME, AIRPORT.AIRPORT_ABBR
```



6.0 Reflection

The making of this project has been a journey of complication, problem-solving, and a continuous learning process. When the project started, none of us knew each other as we are still in online classes. Although it took time for someone to initiate the conversation, the discussion for the assignment goes well and we can divide the task perfectly. As we do the work on each deliverable, it feels like the difficulty of each of it increases significantly when we move from each part of the project. The System Demo (last deliverable) is going to be the hardest part of the whole project. Not only do we need to fix our mistakes from the previous deliverable, but we also need to make database applications implemented using Oracle APEX. At first glance, this feels like a great leap of the task to do since none of us have the experience or the knowledge to do it. We decided to work on the application after we finished the rest of the report. There is some obstacle to the report as we did not understand some of the questions given and don't know how to work at it. But eventually, we figured it out after asking our mentor, Heng Yew Ken, and other friends that are working on the same project. The app development, however, got a bit of a rough start. It took us a lot of videos to watch from YouTube, reference, question-asking, and try-and-error to start working on it.

We can say for sure that this project has brought us hardship, long hours of problem-solving, and mistakes were made. But as a Computer Science student. This project is a meaningful use of time to do. To work in the computer science field, there is surely a much harder task to do, not alone, but as a team of developers. So, in hindsight, not only does this project supply us with experience, but also the knowledge and the ability to work on it as a team. It is also making us realise the importance of database programming as it is used everywhere, from managing coffee shops to storing aircraft data information.

7.0 System Demo
